EXPORT SUMMARY

Export results for horticultural products during August were disappointing. For the first time during fiscal year 1987, export value failed to exceed substantially the corresponding month of a year earlier. U.S. exports of horticultural products shipped to offshore destinations (destinations other than Canada*) in August totaled $182 million, almost identical to the August 1986 figure. Increased shipments of fresh grapes (to the U.K. and Taiwan), raisins (to Germany and Finland) avocados (to France and Japan) and wine and beer (to the U.K. and Japan) were offset by the poor performance turned in by fresh citrus, fresh and processed vegetables, and dried prunes. Movement of oranges, grapefruit, and lemons to Japan, our most important export market for citrus, was off sharply. Orange sales in Hong Kong remained sluggish and lemon export value was adversely affected by this season's lower unit export prices. Fresh vegetable exports in August slipped badly due in large part to a sharp decline in onion sales to Japan because of the satisfactory crop there. Exports of canned corn were off due to a decline in shipments to France while dried prunes suffered from reduced sales in Hong Kong and Western Europe.

(* Canada is excluded because U.S. export data to Canadian destinations are not accurate. Many export shipments to Canada are not counted.)

For further information on items in this circular, contact the Horticultural and Tropical Products Division, (202) 447-6590. All measures not otherwise noted are metric. One kilogram (kg) = 2.2046 lbs., 1 metric ton = 2,204.62 lbs., 1 liter = 0.2642 gallon, 1 hectoliter = 26.42 gallons, 1 hectare (ha) = 2.471 acres.

Approved by the World Agricultural Outlook Board – USDA

UPDATE

General Developments

--The Foreign Agricultural Service invites participation in the U.S. Pavilion at HELFEX '88, National Exhibition Center, Birmingham, England, March 6-7, 1988. HELFEX is the United Kingdom's biennial Health Food Trade Show sponsored by the British Health Food Manufacturers Association and the British Health Food Trade Association. In 1986 over 114 firms and organizations from 14 countries exhibited their product lines and over 2,500 health food traders representing import, wholesale, and retail sectors from 29 countries attended. Participation in the U.S. Pavilion at HELFEX provides exhibitors with lower exhibition costs and greater product exposure than if they participated individually. Participants also receive assistance in booth preparation, product shipping, export product and label review as well as customs clearance. For more information on HELFEX write USDA/FAS, High-Value Products Division, Room 4649-South Building, Washington, DC 20250-1000, Attention: Mark S. Condon, or call (202) 475-3417.

--On October 5, Acting Under Secretary Richard W. Goldberg announced that the Targeted Export Assistance (TEA) allocations for fiscal year 1988, will be $80 million. Of the 34 projects which were listed, 15 are in the horticultural area and will receive $54.45 million. The horticultural commodities that are covered by these projects are: almonds, apples, avocado, citrus, cling peaches, cherries, processed corn, table grapes, kiwifruit, pears, potatoes, prunes, raisins, walnuts, and wine.

--The Dominican Republic, one of the largest suppliers of horticultural products to the United States under the Caribbean Basin Initiative (CBI), is expanding production of non-traditional crops, mainly fruits and vegetables. This expansion is part of the Government's sugar land diversification program. In 1986, area planted to pineapple increased to 6,000 hectares, with overall production estimated at 40,000 metric tons, most of which was exported. Exports of other horticultural crops, such as melons and tomatoes also registered increases during 1986. Many fruit and vegetable growers in the Dominican Republic reportedly are planning to increase their production of these crops to take advantage of the CBI. However, they are constrained by a lack of credit and post harvest handling expertise.

Citrus and Products

--The Government of Japan announced on September 25 a fresh orange import quota of 35,000 metric tons for the second half (October 1987-March 1988) of Japanese fiscal year (JFY) 1987. This brings the total allocation for JFY 1987 to 126,000 tons, an increase of 11,000 tons from the previous year. This completes allocations of fresh orange import quotas under the U.S.-Japan trade agreement reached in 1984. Almost 100 percent of Japanese fresh orange imports continue to come from the United States.

--Brazilian citrus processors will make additional interim payments to growers this season. Processors announced they will advance to growers 40 cruzados (about $0.77) per 40.8 kg. (90 lb.) box of oranges. Twenty-five cruzados were paid on October 15, and 15 cruzados will be paid December 15. The 40 cruzados will be deducted from the final producer payment in July, 1988. The new interim payments are in addition to the 39 cruzados per box of interim payments agreed to earlier this year. Growers had argued that the new payments were necessary to ensure proper treatment of groves in the wake of the inflation-boosted costs of fertilizer, pesticides, and other inputs.

--Major Brazilian orange juice processors are interested in forming a joint venture to build a juice processing and packaging plant in the Soviet Union. The Brazilian firms, a Soviet agency, and a Swedish packaging company signed a "statement of intentions" (not legally binding) in early September. The Brazilian processors view the possible joint venture as an opportunity to sell frozen concentrated orange juice (FCOJ) to the Soviet Union. Although quantities initially would be small, there is considerable long term potential. If the project is economically viable, a processing plant would be built in an apple growing region about 500 kilometers south of Moscow. It would have the capacity to process 20,000 tons of apples to produce 2,000 tons of concentrated apple juice. The apple juice would be exported and the foreign exchange earned would be used to import about 2,000 tons of Brazilian FCOJ. The Soviet plant would reconstitute the orange juice, package it, and sell it in the local market.

Fresh Non-Citrus

--This year's Northern Hemisphere apple production is estimated to be just slightly larger than that of 1986. Reduced output in most EEC and Asian countries has offset increased North American harvests, resulting in an estimated increase of 1.1 percent over last year's apple crop.

Canada expects a 26 percent increase in apple output while the U.S. harvest is estimated to be 23 percent larger than last year's. Total apple output (including noncommercial crop) in EC countries is an estimated 8 percent below 1986 figures with West Germany reporting a 47 percent drop. In Asia, Taiwan's apple output is down an estimated 10 percent, while Japan is harvesting over one million tons--potentially its second largest harvest in the last ten years.

A similar story is shaping up for pear production. Europe and Asia are harvesting equivalent to slightly smaller crops compared to last year while the United States expects about a 13 percent increase. Canada's pear production is predicted to match last year's.

--Japan moves one step closer toward accepting Chilean table grapes. Japan's Ministry of Agriculture has approved the cold treatment method for the control of fruit flies on the Chilean fruit. A high level Japanese agricultural team will soon visit Chile to analyze commercial use of the treatment. Chilean exports of table grapes to Japan could begin as early as spring, 1988.

--The Governments of Finland and Sweden announced early openings for apple and pear imports due to reduced domestic supplies of fruit and vegetable crops in the region. The Finnish Government will allow the import of 30,000 tons of apples, under license, from November 14 through December 31, 1987. After that, apples may enter without license until May 31, 1988. The opening date for pears is October 22, 1987. Although there will be no quantitative restrictions on pear imports, licenses will be required from October 22 through November 30, 1987. As with apples, the closing date for entry of pears is May 31, 1988.

On September 22, 1987, the Agricultural Market Board of Sweden announced a special quota for the import of 6,000 tons of apples. The quota period extended from that date through midnight, October 13, 1987. It is not known at this time whether any U.S. origin apples entered during the limited import period. It is likely, however, that due to the short apple crop in Sweden (12 percent below 1986), an early opening date for apple imports will be announced. U.S. apple exports could benefit, particularly if imports are allowed during the Christmas season.

Apples and pears cannot be shipped into Finland, Sweden, or Norway until the respective governments, in cooperation with local producers, determine the date that domestic supplies will be exhausted. In most crop years, apples are not allowed entry into Sweden until mid-February. The usual opening date for entry of apples into Finland is around the first week in December and can be as late as January or February for pears.

Meanwhile, the U.S. Government is negotiating with Nordic countries over the elimination of import calendar restrictions or at least opening the quotas earlier in the marketing season. The United States held initial consultations in September with Swedish and Norwegian officials in Geneva under Article 23:1 of the General Agreement on Tariffs and Trade (GATT). Formal consultations with Finland are still under consideration.

Dried Fruit & Treenuts

--Walnut production for 1987, in the 6 major producing countries, is estimated at 503,370 metric tons, (inshell basis), up 18 percent over 1986 output. This increase will be fueled by an estimated 44 percent increase in U.S. production to 235,870 tons, the highest level in 5 years. Both Italy and China also are expected to post bumper crops in 1987, while Turkey and India will continue to experience declining production. Total exports also are forecast to rise in crop year 1987/88 to 138,500 tons, (inshell basis), following a 15-percent rise in 1986/87. This increase will be led by shipments forecast at 65,000 tons for the United States. U.S. walnut exports have been steadily increasing over the past 5 years, with the largest increase, 14-percent occurring between 1985/86 and 1986/87.

Walnut production in China, the world's second largest producer, is estimated to be 138,000 tons in 1987. This reflects continued growth in output, but not as fast as the 12 percent rise between 1985 and 1986. The growth of the Chinese walnut industry is the result of increased government assistance and greater attention to walnuts by farmers. Chinese walnut exports rose 12-percent in 1986/87 and are expected to increase by 1,500 tons in 1987/88.

French walnut production is estimated to increase by 1,000 tons in 1987 to 24,500 tons. This increased production will occur in the southwest of France which will mean increased competition for U.S. walnuts in the Spanish market. Exports were up 10 percent in 1986/87, however, imports rose by 60 percent. In 1987/88 imports are expected to decline to previous levels while exports are forecast to remain at their current level of 10,000 tons.

Italian walnut production is expected to rise 67 percent over 1986 output to 20,000 tons in 1987--the largest crop in a decade. Italian imports were up 55 percent in 1986/87 as short domestic supplies and the weaker dollar led to domestic demand being met with foreign supplies. The United States supplied 65 percent of these imports. With larger domestic supplies imports in 1987/88 will decline dramatically, while exports are forecast to reach 5,000 tons.

Turkish walnut production is expected to decline for the third year in succession reaching a low for the decade of 65,000 tons. This poor performance is attributed to dry weather, which has kept yields low despite increasing numbers of trees. Domestic consumption, while still accounting for the bulk of output, is expected to continue to decline, leaving exports unchanged at 5,000 tons despite the short supplies.

Walnut production in India is estimated to be down 13 percent in 1987, due to heavy rains and hail during the bloom. The quality of the nuts will be poor as well, as dry weather later in the growing season impeded fruit development. Exports for 1986/87 were up 55 percent, however, this increase will be short lived as the small crop and high domestic prices are forecast to bring 1987/88 shipments down to 9,500 tons. Complete production, supply and distribution figures for these six countries are provided in the statistical section.

--Pistachio production in 1987, for the five countries from which data are available, is estimated at 47,261 metric tons, 18 percent below 1986 output and 14,339 metric tons lower than the 1985 crop. These figures do not include data from Iran and Afghanistan which combined produce approximately 60 percent of total world pistachio output. Production in 1987 will be reduced by a poor crop in Turkey despite it being an on-year in the Turkish production cycle there and by an off-year in the U.S. cycle. U.S. production for 1987 is estimated at 13,608 tons, up 11 percent over the previous off-year in 1985, but well below the 1986 record crop of 33,970 tons.

The adverse weather which swept the Mediterranean in March, 1986, had little effect on pistachio production as the bloom does not occur until April and May. Turkey, a major producer in the area, however, suffered from dry weather during the bloom and output will be well below the record crop produced during the last on-year in 1985. Production in Greece is estimated to be 16 percent higher than last year with Italian production expected to be at a normal on-year level, though this will be well above the previous on-year in 1985. Syrian production continues to increase with the 1986 crop 8 percent larger than 1985 output and the 1987 crop estimated to be 1,000 tons larger than 1986. This increase is the result of a Government policy designed to encourage pistachio production.

Reporting countries exports, in 1987/88 are forecast to increase by 12 percent over 1986/87, but still will equal only 49 percent of 1985/86 movements. All of these countries consume the major share of their production domestically, with Syria a net importer of pistachios. The United States became a net exporter for the first time in crop year 1986/87 as imports were reduced dramatically by the 317-percent countervailing and anti-dumping duties placed on imports of Iranian pistachios in October, 1986. Exports from Turkey, traditionally a major supplier to Europe, are forecast to remain low in 1987/88, as the domestic price is very high and an export tax remains in place. Production, supply, and distribution figures for the five reporting countries are given in the statistical section of this issue.

Other Processed Fruits

--The total quantity of peaches processed from the 1987 crops in Italy, Greece, and Spain dropped 5 percent from 1986--from 539,000 metric tons to 510,000 tons. These numbers include processing for canned peaches as well as other products such as puree. Italy, with almost one-half of the processing in these three countries, has changed the least, dropping by just 5,000 tons to 255,000 in 1987. In Greece, the quantity processed declined from 199,000 tons in 1986 to 155,000 in 1987. Spain, bucking the trend, is estimated to have increased processing 25 percent, up to 100,000 tons. The 1987 peach crop in Spain attained a record level and is reportedly of very good quality.

The total amount of pears processed, for canning, juice, and other products, in the three countries is estimated to be up fully a third in 1987--to 108,000 tons. The increase is due mainly to Spain's rebounding from a weather-plagued harvest in 1986. Spanish processors are utilizing 45,000 tons of pears in 1987, up from only 10,000 last year. Italian processing dropped 8 percent to 60,000 tons. Processing in Greece in 1987 fell 50 percent to 3,000 tons.

Vegetables

--**CORRECTION**--EC processing subsidies for canned tomato products were published in the Statistical Section, page 24, of the September 1987 Horticultural Products Review Circular. The subsidies shown for Italy for last season (1986/87) for whole, peeled San Marzano, and whole, peeled Roma & similar tomatoes were incorrect. The correct EC processing subsidies, applicable in Italy, for canned, whole tomatoes are as follows (data in stated currency units per metric ton):

Commodity/ Mktg. Year	Minimum Grower Price	Processing Subsidy Net	Raw Wt.Equiv.	Net Cost of Tomatoes		
	ECU	ECU	ECU	ECU	Lire	US$
San Marzano						
1986/87	154.47	117.46	88.10	66.38	103,147	73.91
1987/88	147.52	115.84	86.88	60.64	98,783	75.12
Roma & Similar						
1986/87	117.61	86.42	64.82	52.80	82,043	58.79
1987/88	113.49	82.27	61.70	51.79	84,362	64.15

--Estimates of Italian canned tomato and canned tomato paste production for 1987/88 have been revised downward from those previously published (Horticultural Products Review, July 1987, pp. 22,23). Production of canned tomatoes is expected to reach 971,000 tons, up 65 percent from 1986/87. Production of tomato paste is expected to be 223,000 tons, down 23 percent from 1986/87. Beginning stocks of both canned tomatoes and tomato paste are very low. For canned tomatoes they are estimated at only 10,000 tons, 60,000 tons less than the July estimate. Because of the tight stocks situation, foreign buyers anticipating an increase in price have tried to purchase large quantities of canned tomatoes in the beginning of the processing season. The early October price, in fact, increased by about 10 cents per kilogram from the previous month.

The Italian tomato production and processing industry continues the shaking out process, with many growers switching crops and many processors going out of business. Increasing production costs are forcing many growers to streamline costs by funneling the harvest into a single operation. This action, in turn, causes processors headaches as the harvested tomatoes are of varying quality and maturity. These problems, coupled with the inability of growers to reach an agreement with processors on the amounts to be delivered, have contributed to price uncertainty and reduced planted area.

ITALY: PRODUCTION, SUPPLY, AND DISTRIBUTION OF CANNED TOMATO PRODUCTS (1,000 metric tons, net weight)

Item/Mktg Yr	Begin Stocks	Prdctn	Import	Total Supply	Export	Domstc Cnsmpn	End Stocks
Canned Tomatoes 1/:							
1986/87	372.0	587.0	0.0	959.0	449.0	500.0	10.0

1/ Includes wedged, diced, crushed, and other non-concentrated products.

--U.S. and Canadian imports of both table and seed potatoes were up in the 1986/87 season, due to a smaller crop and more favorable prices on both sides of the border. Canadian importers purchased 13 percent more U.S. potatoes while the United States imported 69 percent more Canadian potatoes compared to the previous year. Canada relies most heavily on U.S. potatoes from May through August when Canadian supplies are seasonally low. Canadian imports have remained more stable over the past 3 years than have U.S. imports.

FRESH POTATO TRADE BETWEEN THE UNITED STATES AND CANADA
JULY-JUNE MARKETING YEARS (1,000 METRIC TONS)

SEASON	U.S. IMPORTS			CANADIAN IMPORTS

1985/86	2,291	621	2,912	2,975	235	3,210
1986/87	3,953	943	4,896	3,379	213	3,592

Source: U.S. imports: Bureau of Census; Canadian imports: Statistics Canada.

Beer, Wine, and Hops

--The forecast for French wine production in 1987 has been increased slightly to 71.33 million hectoliters (1,884 million gallons). This volume is 2.15 million hectoliters less than the previous year, but 5 percent above the 1981-1985 average. Production of quality wines is down 8 percent, and ordinary wine is down 2 percent when from last year.

U.S.--CANADA FREE TRADE AREA AGREEMENT: IMPLICATIONS FOR HORTICULTURAL TRADE

The United States and Canadian negotiators concurred on a Free Trade Area agreement (FTA) that will stimulate trade by eliminating all tariff and some non-tariff barriers before the year 2000. The agreement, if approved, would become effective January 1, 1989. However, the agreement is subject to approval by the U.S. Congress, the Canadian Parliament, and Canada's provinces. U.S. Congressional approval is under a "fast track" procedure whereby the agreement is considered approved unless the Congress specifically votes it down. The fast track procedure does not allow ammendments.

The FTA will play an important role in future North American horticultural trade. Currently, horticultural products comprise 48 percent of total Canadian agricultural imports from the United States and 18 percent of total U.S. agricultural imports from Canada. Approximately one third of U.S. horticultural exports are destined for Canada.

Tariffs

Tariffs will be eliminated gradually over a 10 year staging period beginning January 1, 1990. The tariff concessions are strictly on a bilateral basis, i.e., they are not extended on a most favored nation (MFN) basis. Currently, many horticultural commodities enter Canada free from duty; however, tariffs, many of them seasonal, limit access to Canadian markets for some commodities. Current tariffs for 13 items which account for over one-half of Canada's $1.2 billion of horticultural product imports from the United States are as follows:

ITEM	CURRENT TARIFF	APPLICABLE PERIOD (Number of weeks)
Grapes (Vinifera)	Free	--
Oranges, Mandarines	Free	--
Lettuce	15%	16
Tomatoes	15%	32
FCOJ (Retail Containers)	3%	--
Live trees, Plants	Free	--
Apples	Free	--
Celery	15%	18
Potatoes	35¢/cwt	--
Grapefruit	Free	--
Strawberries	10%	8
Peppers	10%	12
Shelled Almonds	Free	--

-- Indicates year-round applicability

The United States is the dominant supplier for many of the products shown above, especially for fresh vegetables. Examples of current Canadian tariffs for a few other items where the United States is not the dominant supplier, are as follows:

ITEM	CURRENT TARIFF
Canned Peaches	13%
Frozen Strawberries	15%
Raisins	Free
Canned Tomatoes	12.5%
Cut flowers	12.5%

During the first 20 years of the agreement, fruit and vegetable growers in either country may petition to have full duties temporarily restored at times of depressed prices. If import prices fall below 90 percent of the past five year average, and area planted is not above the average planted over the past 5 years (omitting the highest and lowest years for either qualification), then the government in the importing country has the option to reimpose the full MFN tariff rate. This amount will equal the MFN tariff rate (i.e., the rate for third countries) existing at the time the FTA was agreed upon or the current rate, whichever is lower. This snap back mechanism applies to all fresh fruits and vegetables as well as certain frozen products such as strawberries. The snap back tariff may be applied for up to 180 days on any applicable commodity one time only in any one year. The country applying the snap back must inform the other two days before implementation. In Canada the new system will replace the fast track surcharge system for horticultural products. The snap back provision of the FTA will expire in 2009.

The problem of transshipment of horticultural products through Canada into the United States has been addressed by the "rules of origin" which will apply to commodities shipped under the reduced tariff provisions of the FTA. Under these rules, commodities from a third country must be substantially transformed before they can be re-exported to the FTA partner. In most cases, "substantial transformation" occurs when a product moves from one chapter of the new Harmonized System of tariffs to another. Adding water is not considered a substantial change. It is expected that these "rules of origin" will serve to deter third countries from benefitting from the lower tariffs between the United States and Canada. In addition, there will be no duty drawbacks for products which are transformed and re-exported except for citrus products from the United States to Canada.

Wine

The agreement will cover listing, distribution, and the mark-up procedure for U.S. wines sold in Canada. U.S. wines will receive more equitable treatment by the provincial liquor control boards (LCB). Listing of wines will be non-discriminatory and will be based on normal commercial considerations. The LCB in each province must apply the same listing regulations for U.S. wines as for Canadian wines, and must ensure that wine listing information is available to all interested parties. Once listed by a province's LCB, U.S. wines will have improved access to the distribution and marketing system in Canada. Canada's discriminatory mark-up system will be phased out so that U.S. producers will be able to compete on more equal footing in Canadian markets. This move may further open the door to U.S. quality bottled wine.

Other Provisions

Both countries have agreed to work toward the harmonization of health, sanitary and marketing regulations. Canadian barriers such as the need for waivers on bulk produce shipments and the ban on consignment sales still remain. U.S. grade restrictions on imports under section 608e of the marketing order legislation also will remain in place.

Quantitative restrictions on agricultural trade will remain in place. The United States will retain Section 22 restraints which affect imports of price-supported commodities with the following exceptions. Section 22 restraints will not be placed on products with 10 percent or less sugar, and no restraints will be applied to wheat, barley or oats unless there is a substantial change in the support programs in either country. This however, will not have an impact on fruit and vegetable trade. The Canadians will not be inhibited from imposing import controls such as those which could be implemented by the proposed National Potato Board.

The FTA disallows direct export subsidies for products shipped between the two countries.

Leslie Berger (202)382-8899

EUROPEAN COMMUNITY: A MAJOR MARKET FOR U.S. HORTICULTURAL PRODUCTS

The total value of U.S. horticultural product exports has grown from $1.35 billion in 1975 to $3.5 billion in 1986, a 156 percent increase.1/ While the lion's share of this growth has occurred in sales to Japan and other countries of the Far East, sales to Canada and the European Community (EC), traditional markets for U.S. horticultural products, posted impressive gains as well. Exports to Canada and the EC grew by 115 and 99 percent respectively between 1975 and 1986, and still accounted for 35 and 16 percent of the total in 1986. It must be kept in mind that a portion of this growth is due to inflationary pressures on prices; however, increases in export quantities also occurred.

The value of U.S. horticultural exports to the EC has fluctuated greatly over the past 12 years. From 1975 to 1980 the value of U.S. exports rose steadily as food prices climbed, fueled by the oil shocks and inflation. This increase culminated in 1980 with a record high of $722 million in U.S. horticultural exports to the EC. From 1980 to 1984 the value and quantity of U.S. exports to the EC decreased dramatically as prices declined, importers reacted to the increasing value of the U.S. dollar, and demand for imported products dropped in response to increased production within the EC. By 1984 the value of U.S. exports to the EC had bottomed out at $443 million. Since then there has been a slow but steady recovery to $547 million in 1986. The figures for the first seven months of 1987 confirm that this trend is continuing, as the value of exports to the EC are running 15 percent ahead of the pace set in 1986. This recovery is caused inpart by improved price competitiveness of U.S. products due to the declining value of the U.S. dollar and to increased export promotion efforts by U.S. producers.

U.S. HORTICULTURAL PRODUCT EXPORTS

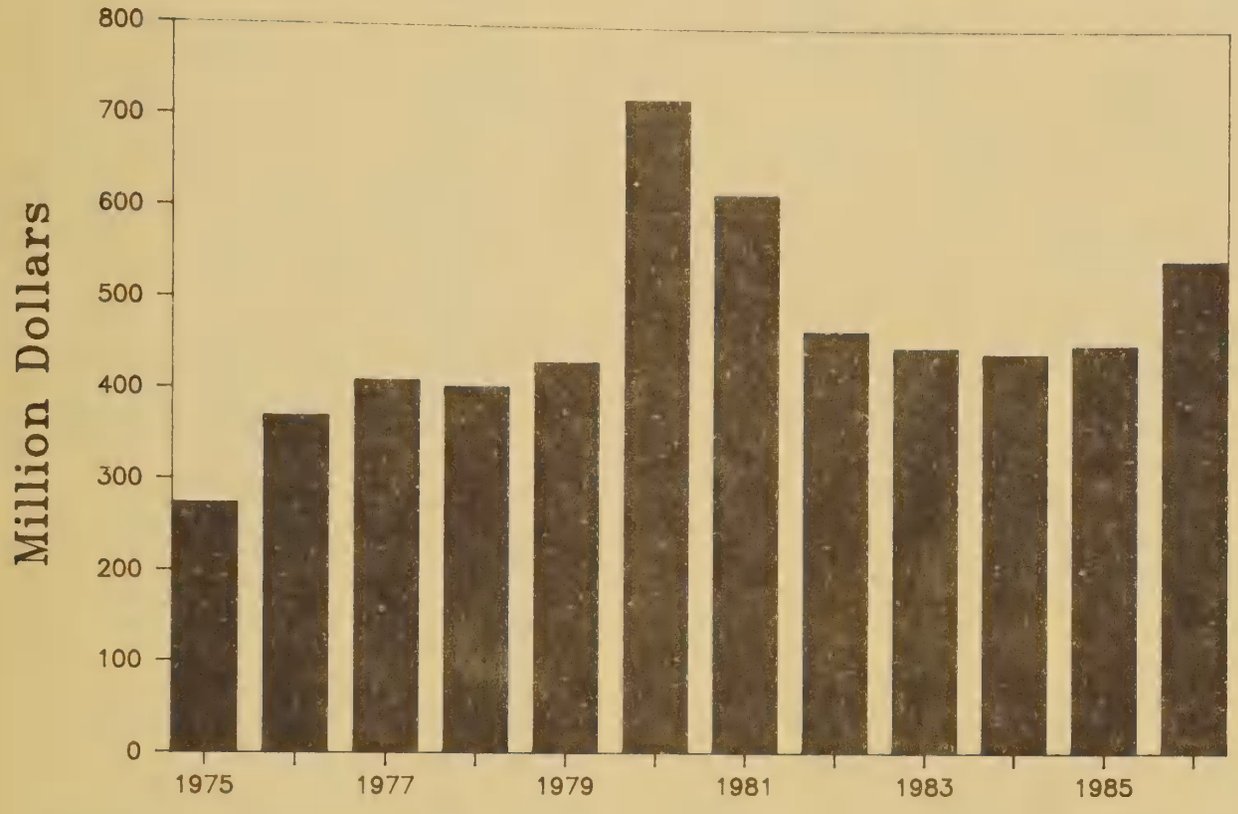
* Represent exports for the first 7 months of the year, January to July. Figures for 1986 given for comparison.

1/ Due to under reporting of exports to Canada in U.S. Department of Commerce statistics, the official figures have been brought inline with official Canadian Import Data. See the August, 1987, Horticultural Product Review.

U.S. HORTICULTURAL EXPORTS TO EC 10



Exports of U.S. horticultural products to the EC market are made more difficult by the numerous subsidies and other programs of the Common Agriculture Policy (CAP), adopted by the EC in 1970. These policies encourage production within the Community and grant preferential treatment to products imported from some competing producer countries. The policies of the CAP and their impact on EC imports of horticultural products is outlined in an article in the September Horticultural Products Review. The current article reports the performance of 14 major horticultural products exported by the United States to the EC since 1970.

The majority of these products--canned corn, raisins, prunes, grapefruit, apples, almonds, and walnuts--have shown increases in both the quantity and value of exports since 1970. Four--lemons, oranges, canned peaches, and canned fruit cocktail--have declined, while grapefruit juice and fresh vegetables remained at the same level. There has however, been tremendous fluctuations between 1970 and 1986, with the patterns of growth or decline varying greatly. The export figures for these products are given in a table at the end of this article.

If your address should be changed_____PRINT OR TYPE the new address, including ZIP CODE and return the whole sheet and/or envelope to:

FOREIGN AGRICULTURAL SERVICE, Room 4644 So.
U.S. Department of Agriculture
Washington, D.C. 20250

HOW TO SUBSCRIBE

Horticultural Products circulars are issued 12 times a year. They are available on a subscription basis for $20.00 in the United States or $30.00 mailed to foreign addresses.

To subscribe, send your check, payable to the Foreign Agricultural Service, to: Foreign Agricultural Service, Information Division, Room 4644-S, U.S. Department of Agriculture, Washington, D.C. 20250. Only checks on U.S. banks, cashier's checks or international money orders will be accepted. NO REFUNDS CAN BE MADE.

HOW TO RENEW

You will receive a notification about 60 days before your annual subscription expires. To prevent a lapse in service, promptly return your renewal form and payment. **Inquiries:** If you have a question about your subscription, write to the above address or call (202) 382-9445.
